# OVERVIEW

- **Discovering STBs**
- **Administrative Access**
- **Wi-Fi AP deploying**
- **Operator Access**
- **Considerations---注意事项**

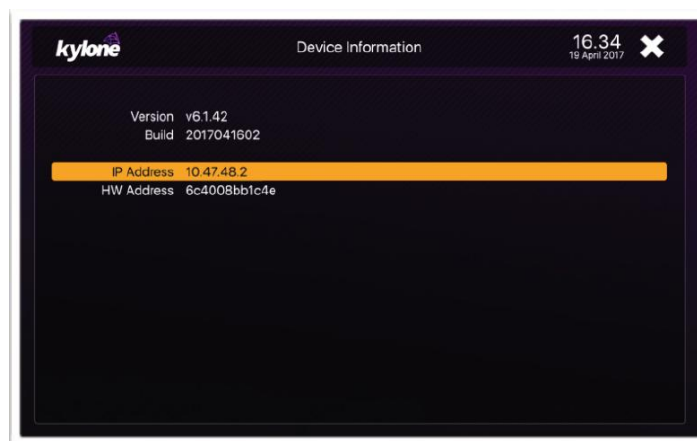

## DISCOVERING STB

1. Navigate to “Content” -> “Assignments” -> “Settings Page”.
2. Click “Edit”, and add “Display information” to the list.
3. Activate the changes by clicking “Commit” under “Content” -> “Settings”.

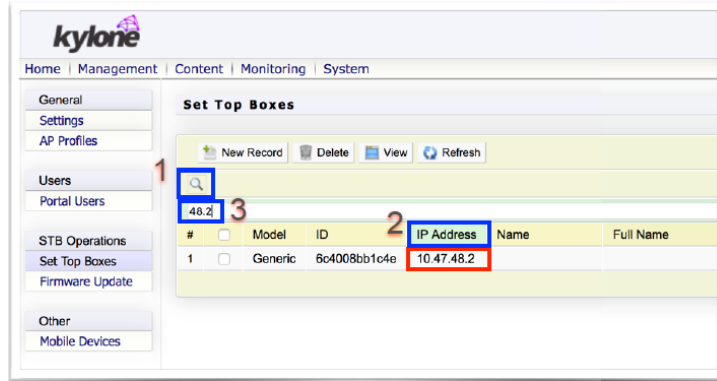

## Access to STB

1. Connect an STB to the network and boot it.
2. Go to “Device Information” under “Settings” on the STB. Locate MAC and IP addresses.

## Administrative Access

1. Navigate to “Set Top Boxes” under “Management”.
2. Search STB by detecting the IP address and MAC address.

3. Click “Edit” to configure the STB, and “Save”.

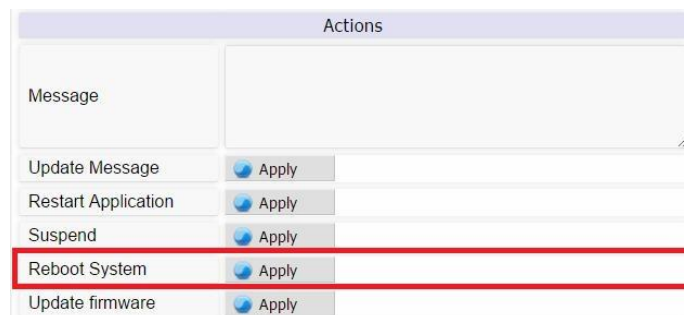

## WIFI AP DEPLOYING

1. Navigate to “Management” -> “Set Top Boxes”. Select STB and click “Edit”. Configure WIFI AP for the STB.

2. Click “Save” and “Apply” to reboot the STB. New configuration will activate after reboot.

## Operator Access

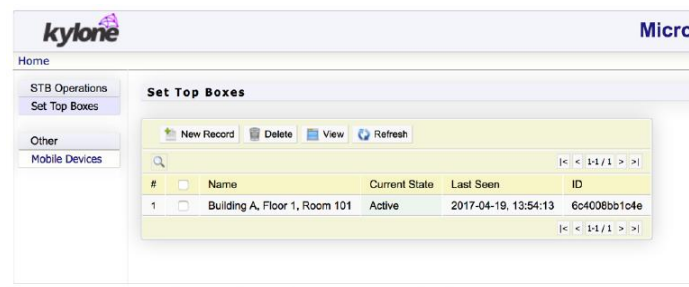

1. Logout from Administrator credential and log-in again with Operator credential.

Username: user

Password: kylone@1

2. Navigate to "Set Top Boxes".

3. Click a record to see details, and add Greeting words for the STB.

## CONSIDERATIONS

- STBs may have MAC address written on the unit. You can directly use this information to configure STBs "Name" and "Full Name" fields without doing discovery.
- Reports will use "Full Name" field if it is configured. Otherwise ID will be used on the reports for STBs.
