

# TBS6909 User Guide

Dear Customers,

Thank you very much for using TBS products. The TBS6909 is a PCI Express TV tuner card that supports a variety of digital TV standards including DVB-S2 / S, allowing switching between different digital TV signals.

In order to use this item correctly, please read this user manual carefully at the beginning.

## 1. Hardware Installation

### 1.1 Install TBS TV Tuner Card

Power off the computer, remove computer cover and take out cover panel of PCI-e slot in which you want to put the card. Insert the card in **PCI-e slot** and fix card bracket with screw. Make sure the card fit in PCI-e slot tightly. Then put back computer cover.

#### Attention:

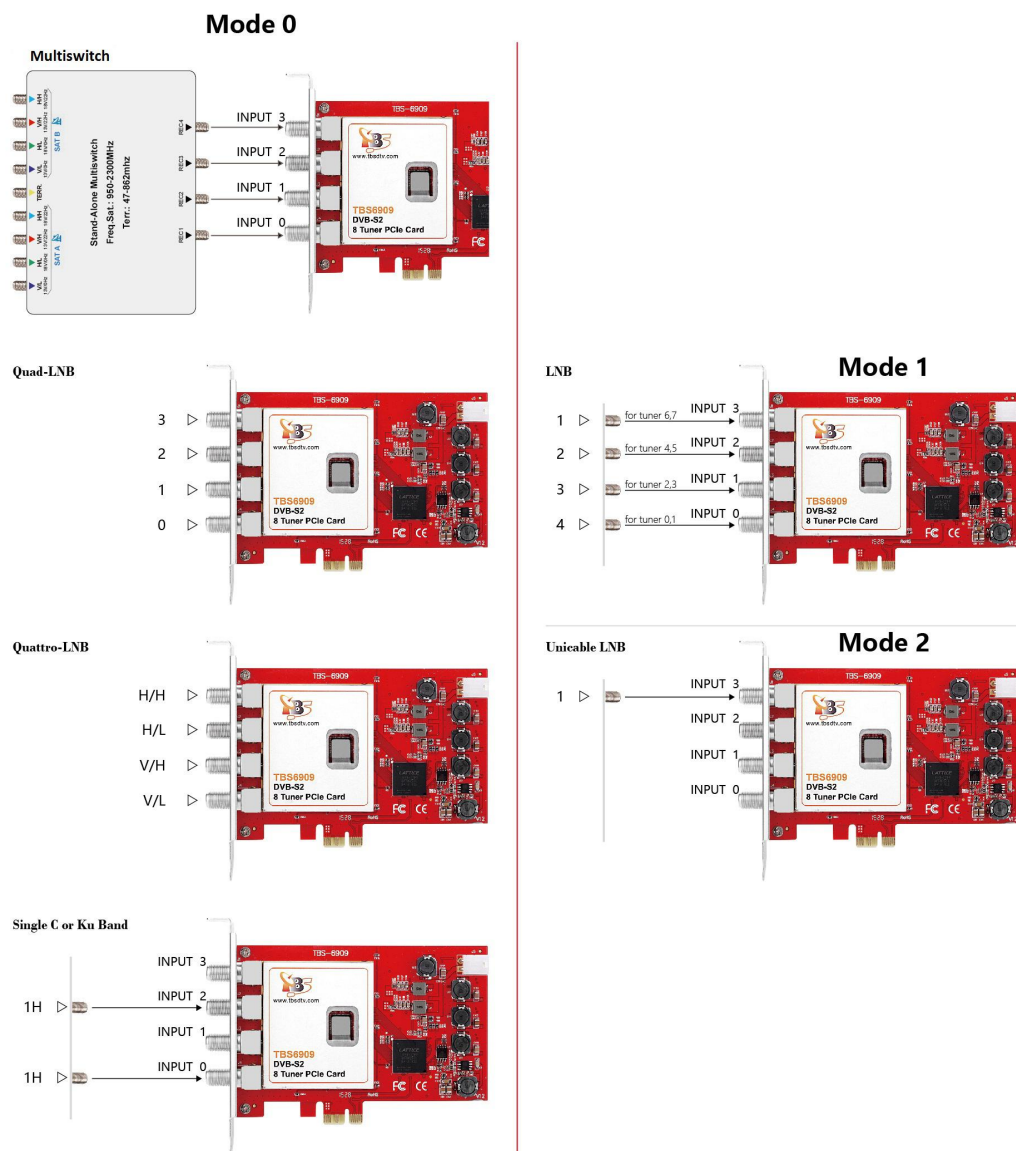

- ① When turn off the computer, please do not touch the PC internal components especially the CPU and VGA chip, which has a high temperature with a risk of burns.
- ② Please be sure to see the manual of PC and peripheral equipment.

1.2 If you connect with a big Motor or the power from the PCI-e slot not enough then you need to provide extra power supply for the TV tuner PCI-e card. (See below)

### 1.3 Connect TV Signal Cable to the TV Tuner Card on Your PC

Thanks for using TBS6909, TBS6909 is a powerful DVB-S/S2 octa tuner card, and there is some information you need to know before using. C signal 5150 V access Input0, H access to Input 2, C signal 5750 V access Input 1, H access to Input 3  
There are three ways of signal input for TBS6909, which are shown as the picture below:

## Linux open source driver model

### Working mode: Multiswitch mode: (Mode 0)

If you are using quad LNB, you can directly connect the 4 cables to the 4 ports of TBS6909.

If you are using quattro LNB, you have 4 cables (V/L,V/H,H/L,H/H), connect the right one to TBS6909 like the above picture ( input 0- input 3 should be connected to V/L,V/H,H/L,H/H respectively).

If you are using C band or Ku band single, then two inputs are enough, you just need to connect the cables to input 0 and input 2.

Input 0 Interface: You can only receive DVB-S/S2 TV channels from **low-frequency noise V/L TV signals**. After connecting to these TV signals through “Input 0 Interface”, you can receive SD/HD TV channels from the 8 different satellite transponders simultaneously.

Input 1 Interface: You can only receive DVB-S/S2 TV channels from **high-frequency noise V/H TV signals**. After connecting to these TV signals through “Input 1 Interface”, you can receive SD/HD TV channels from the 8 different satellite transponders simultaneously.

Input 2 Interface: You can only receive DVB-S/S2 TV channels from **low-frequency noise H/L TV signals**. After connecting to these TV signals through “Input 2 Interface”, you can receive SD/HD TV channels from the 8 different satellite transponders simultaneously.

Input 3 Interface: You can only receive DVB-S/S2 TV channels from **high-frequency noise H/H TV signals**. After connecting to these TV signals through “Input 3 Interface”, you can receive SD/HD TV channels from the 8 different satellite transponders simultaneously.

Notes: If you would like to receive full TV channels from V/H satellite TV signals simultaneously, you need to connect your satellite TV signal cable to the corresponding “Input” interface.

## Working mode: Normal mode (Mode 1)

At the very beginning, you have to create configuration file under the Linux system directory: **/etc/modprobe.d/mxl58x.conf**. The content of the configuration file: **options mxl58x mode=1**. After configuration completed, please reboot your computer.

A screenshot of a terminal window with a blue title bar containing the text "1 新建会话 (46)". The terminal has a black background with white text. The command "options mxl58x mode=1" is entered on the first line, with the cursor at the end of the line. Below the command, there are several tilde (~) characters on separate lines, indicating a multi-line command or a list of options.

Under the condition of Normal mode: You can search full TV channels from **high-frequency / low-frequency noise V/H TV signals via** all the four interfaces "Input 0 ,Input 1,Input 2,Input 3 interface".

Connecting to satellite cable:

Input 0: only work for Tuner 0 and Tuner 1

Input 1: only work for Tuner 2 and Tuner 3

Input 2: only work for Tuner 4 and Tuner 5

Input 3: only work for Tuner 6 and Tuner 7

Notes: If you would like to receive full TV channels from V/H satellite TV signals simultaneously, you need to connect more than 2 satellite TV signal cable to the corresponding "Input" interface. For example, connecting satellite cable to "Input 0" interface and "Input 1" interface, then you can separately search TV channels from V/H satellite TV signal at the same time

Normal mode, input0 corresponding to Tuner0 or Tuner1, can only work V or H of which a signal channel, if you want to work V Tuner0 signal channel, Tuner1 work H signal channel, is not allowed

## Working mode: Unicable (Mode 2)

At the very beginning, you have to create configuration file under the Linux system directory: **/etc/modprobe.d/mxl58x.conf**. The content of the configuration file: **options mxl58x mode=2**. After configuration completed, please reboot your computer.

## 1.4 Multi satellite usage:

In some case multiswitch have more than one satellite input, need to choose the satellite first, then you can use this mode . It will be selected satellite by sending Diseqc command.

In this mode, if input 0 to input 3 has at least an active input then all tuners can get lock, for example:

If we have a VH signal connected to input 1 come from satellite B, use dvblast to scan the channel: Such as **VH DVB-S** you can do this, DVB-S do not need to use -m qpsk  
`dvblast -f 12538000 -s 41250000 -v 13 -a 0`

it means that the VH port is choose satellite B, the other 7 tuners all can get the satellite B VH signal.

If we have a HL signal connected to input 2 come from satellite A, use dvblast to scan the channel: Such as **VH DVB-S2** you can do this

`dvblast -f 11080000 -s 43200000 -v 18 -m psk_8 -a 0`

it means that the HL is choose satellite A, the other 7 tuners all can get the satellite A HL signal.

If you have four kinds active signal connected to correct 4 inputs, then you can get all VL, VH, HL, HH signal.

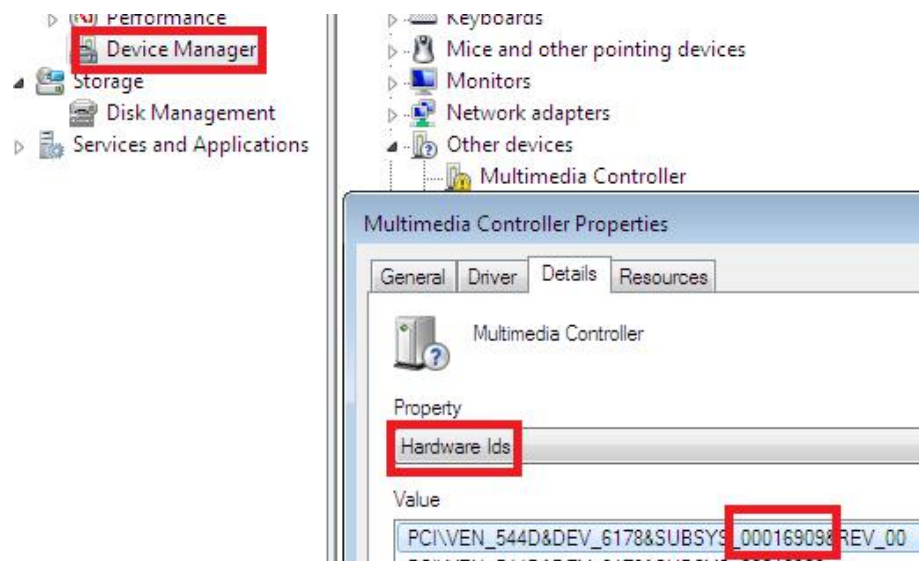

## 2. windows driver installation

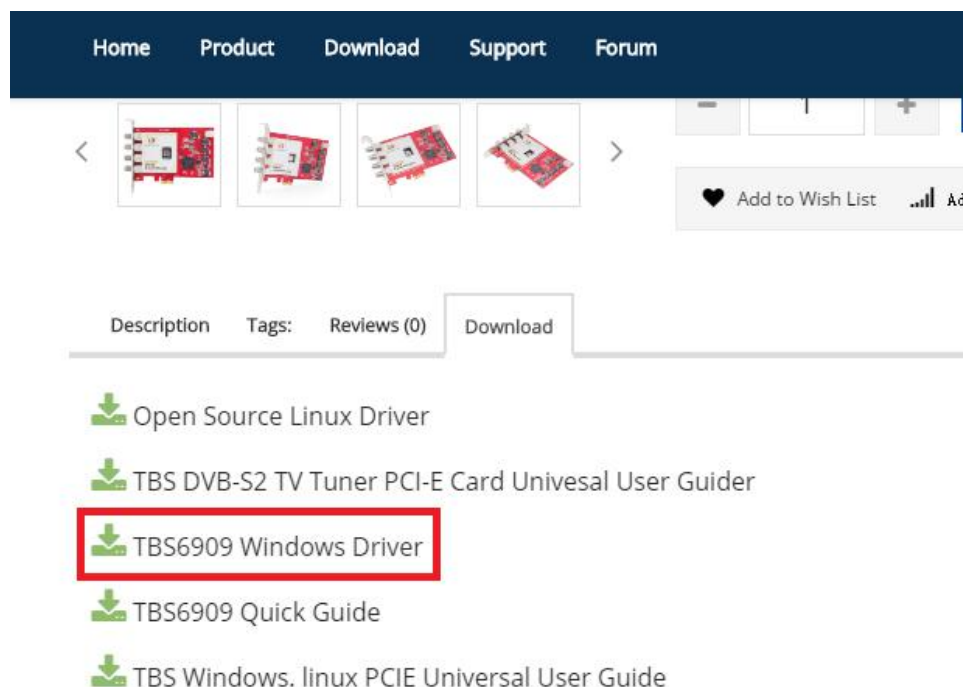

2.1 Start your PC and jump to “Computer Management”. There will pop up a notice “Failed to install the device driver” if you use Windows 7 operating system.

In order to install the driver successfully, you have to do as the prompts step by step. Then you can check the TBS TV tuner hardware device ID as follows: Open “Computer Management”, click “Other devices”, finally choose and double click the right hardware device for more details.

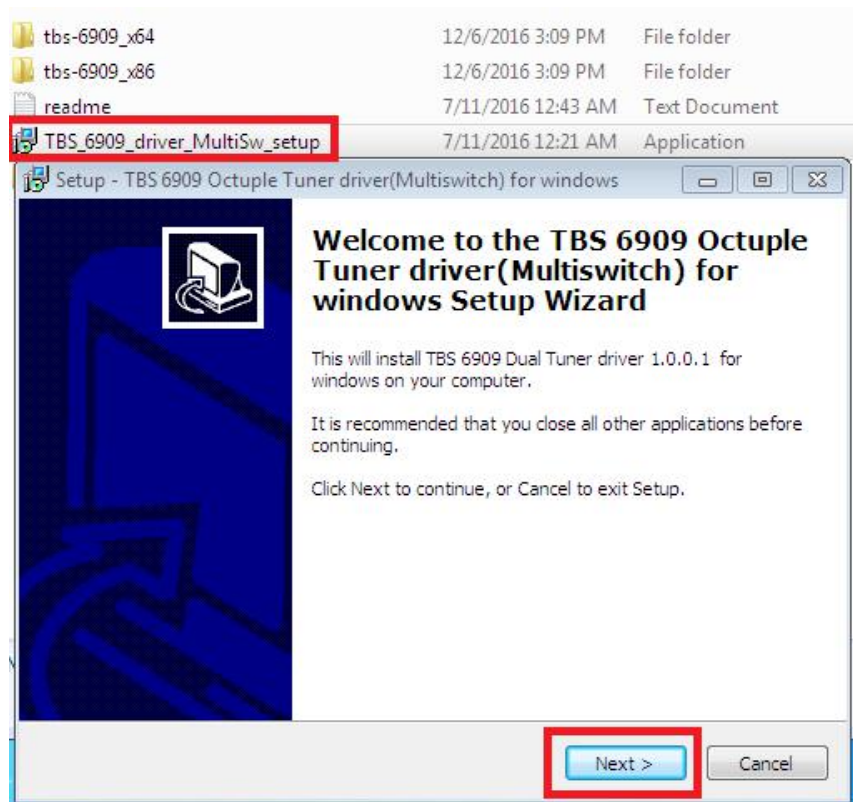

Please kindly see the following screenshot for your reference.

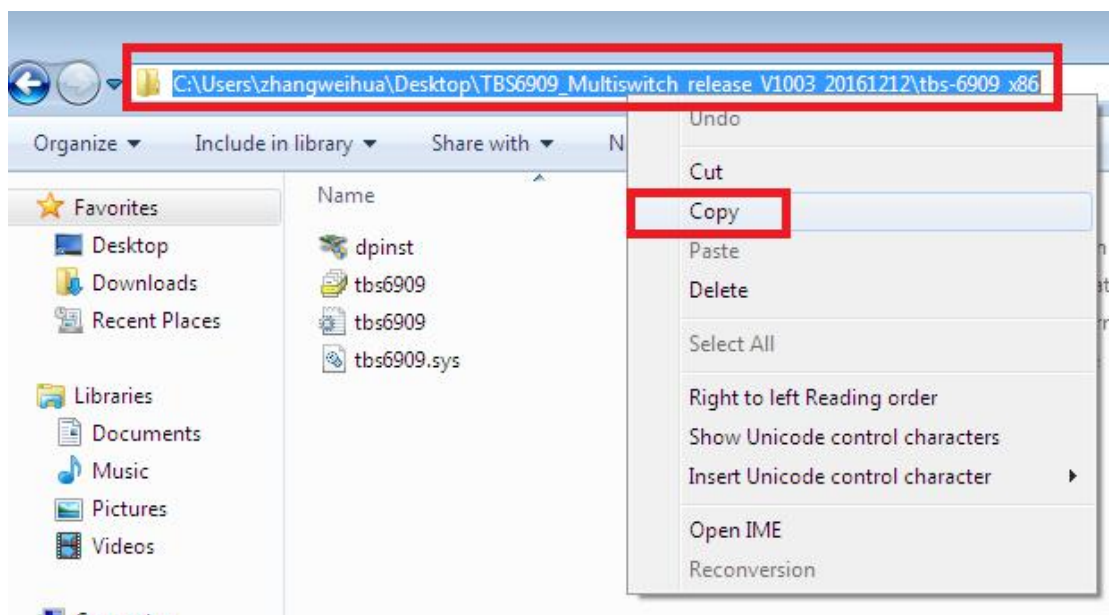

2.2 Download TBS6909 Windows Driver from Our Website (See screenshot below)  
<http://www.tbsiptv.com/tbs6909-dvb-s2-8-tuner-pcie-card?search=6909>

- 2 ) download and then unzip TBS 6909 Windows driver
- 3 ) Click “TBS\_6909\_driver\_setup”, and then a new window will pop

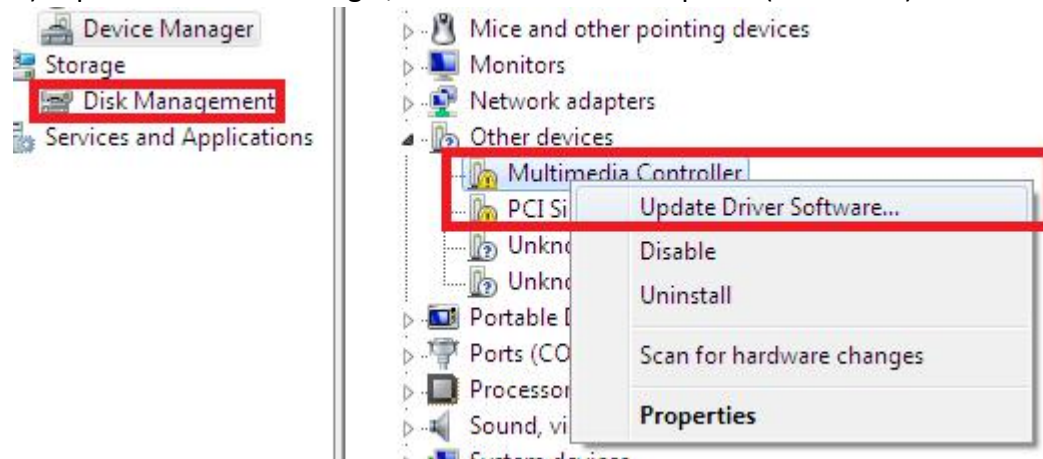

- 4 ) If the quick installation fails to try to manually install, open the drive compression package, according to their own system, copy the drive path (see below)

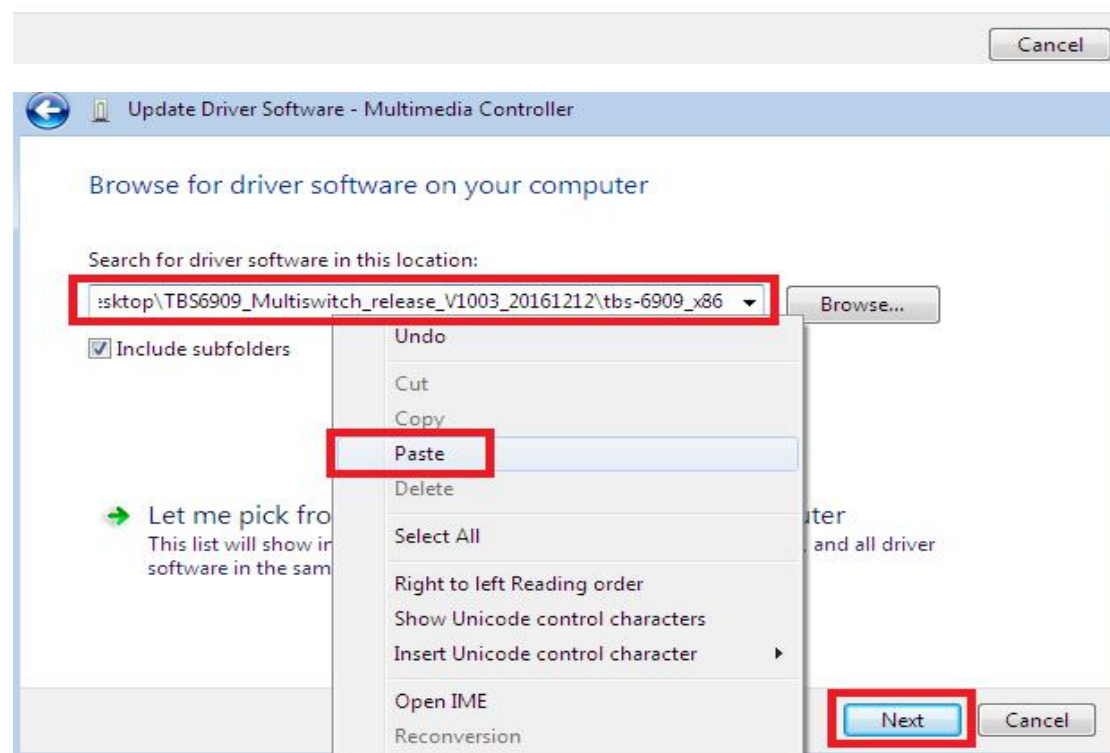

5) Open the device manager, to drive the manual update (see below)

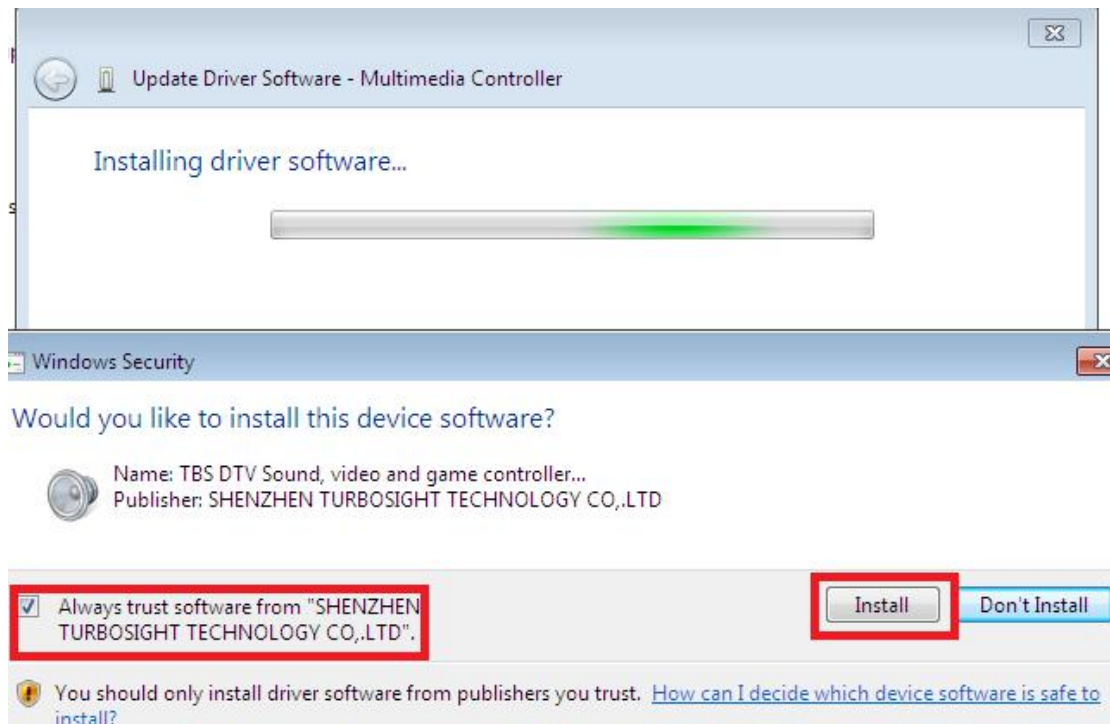

How do you want to search for driver software?

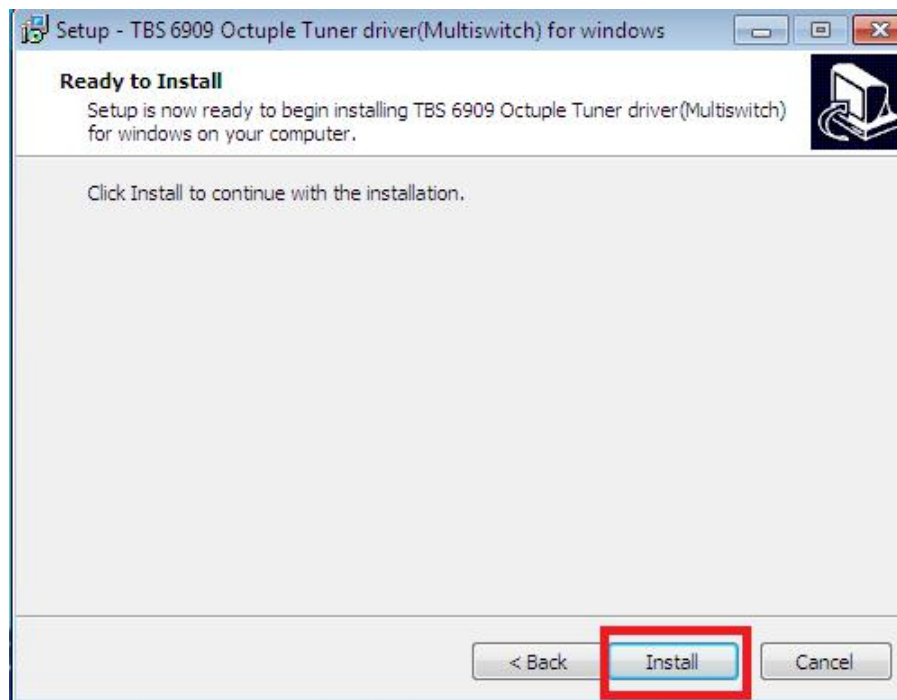

→ Search automatically for updated driver software  
Windows will search your computer and the Internet for the latest driver software for your device, unless you've disabled this feature in your device installation settings.

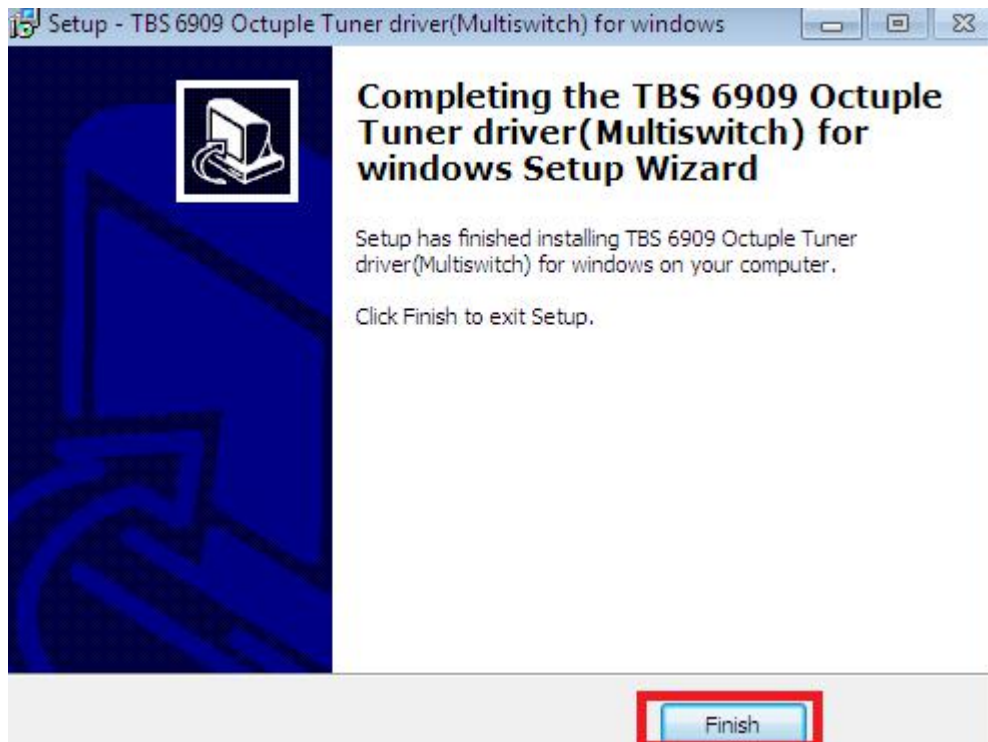

→ Browse my computer for driver software  
Locate and install driver software manually.

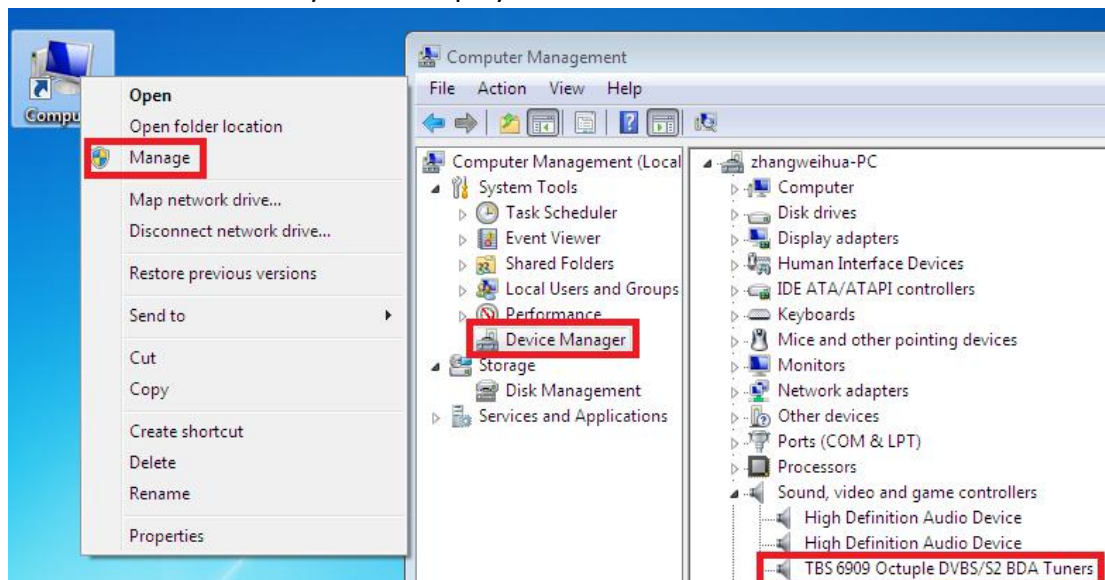

6 ) Click “Next” “Install” “Finish” to complete installation

5) To verify if driver was correctly installed: Choose “My Computer”, right click and choose “System Properties” to pop up “System Properties” windows, click “Hardware” → “Device Manager”. Then click “+” in front of “Sound, video and game controllers”. If you can see “TBS6909 Dual BDA Tuners” that means you do have installed driver correctly. Just display as below:

### 3.Play Software Installation

To enjoy satellite TV on PC or record video, you still need to install player software and right set the search parameters. The above series of TBS TV tuner Card is compatible with a lot of software like TBSViewer, DVBDream, ProgDVB etc.

Here is a link is for downloading Player software. For detailed installation instructions, see its Software Installation Instructions.

<http://www.tbsiptv.com/index.php?route=product/download&path=6>

Moreover, you can check some Video Guide on the following link:

<https://www.youtube.com/user/buydVB/videos>

#### ATTENTION:

- ① In some case, the card can not be detected by your PC, you can't see the device in Device manager, please try to change a PCIe slot and try again; or the golden finger is oxidized in the air, clear it by an eraser and try.
- ② Don't insert or pull the card out directly when your computer is working, otherwise it will damage your tuner card.

## 4. Linux open source drive installation

4.1 Reboot your computer and then enter the operating system webui, right click to open “Terminal”, input the command “sudo-s” and Ubuntu default password; finally you will get access to the operating system.

4.2 # lspci -vvv | grep 6909 (This command detects whether there is “Device 6909”, displaying as the following webui. )

```
root@zwh-desktop: ~  
zwh@zwh-desktop:~$ sudo -s  
[sudo] password for zwh:  
root@zwh-desktop:~# lspci -vvv | grep 6909  
Subsystem: Device 6909:0001  
pcilib: sysfs_read_vpd: read failed: Input/output error  
root@zwh-desktop:~#
```

4.3 Set up a directory named “tbsdriver”. Here takes saving the directory on the desktop as an example.

# mkdir tbsdriver (See screenshot below.)

```
xtream@xtream-To-be-filled-by-0-E-M:~$ sudo -s  
[sudo] password for xtream:  
root@xtream-To-be-filled-by-0-E-M:~# mkdir tbsdriver  
root@xtream-To-be-filled-by-0-E-M:~#
```

4.4 Execute the command and install “git” package. (See screenshot below.)

# apt-get install git

```
xtream@xtream-To-be-filled-by-0-E-M:~$ sudo -s
[sudo] password for xtream:
root@xtream-To-be-filled-by-0-E-M:~# apt-get install git
Reading package lists... Done
Building dependency tree
Reading state information... Done
Suggested packages:
  git-daemon-run | git-daemon-sysvinit git-doc git-el git-email git-gui gitk
  gitweb git-arch git-cvs git-mediawiki git-svn
The following NEW packages will be installed:
  git
0 upgraded, 1 newly installed, 0 to remove and 138 not upgraded.
Need to get 0 B/3,006 kB of archives.
After this operation, 24.0 MB of additional disk space will be used.
Selecting previously unselected package git.
(Reading database ... 211973 files and directories currently installed.)

Unpacking git (1:2.7.4-0ubuntu1) ...
Setting up git (1:2.7.4-0ubuntu1) ...
root@xtream-To-be-filled-by-0-E-M:~#
```

4.5 Enter the directory of “tbsdriver”, and then download “media build” and “media” files. (See the following screenshot.)

# git clone [https://github.com/tbsdtv/media\\_build.git](https://github.com/tbsdtv/media_build.git)

# git clone --depth=1 [https://github.com/tbsdtv/linux\\_media.git](https://github.com/tbsdtv/linux_media.git) -b latest ./media

```
root@xtream-To-be-filled-by-0-E-M:~/Desktop# cd tbsdriver/
root@xtream-To-be-filled-by-0-E-M:~/Desktop/tbsdriver# git clone https://github.com/tbsdtv/media_build.git

remote: Total 3398 (delta 0), reused 0 (delta 0), pack-reused 3398
Receiving objects: 100% (3398/3398), 640.51 KiB | 3.00 KiB/s, done.
Resolving deltas: 100% (2415/2415), done.
Checking connectivity... done.
root@xtream-To-be-filled-by-0-E-M:~/Desktop/tbsdriver# git clone --depth=1 https://github.com/tbsdtv/linux_media.git -b latest ./media
Cloning into './media'...
remote: Counting objects: 59051, done.
remote: Compressing objects: 61% (33904/55580)
```

4.6 Enter the directory of “media build”, execute “make dir DIR=../media” as the following screenshot.

# make dir DIR=../media

```
root@xtream-To-be-filled-by-0-E-M:~/Desktop/tbsdriver# ls
media media_build
root@xtream-To-be-filled-by-0-E-M:~/Desktop/tbsdriver# cd media_build/
root@xtream-To-be-filled-by-0-E-M:~/Desktop/tbsdriver/media_build# make dir DIR=../media
make -C linux/ dir DIR="../media"

## 6. Use dvblast under Linux Operational Environment

### 6.1 Connect Satellite Cable to LNB

### 6.2 Lock TV Channels from DVB-S Signal. (See screenshot below.)

Such as **VH DVB-S** you can do this

(Tuner 0) dvblast -f 12538000 -s 41250000 -v 13 -a 0

```
root@zwh-desktop: ~
zwh@zwh-desktop:~$ sudo -s
[sudo] password for zwh:
root@zwh-desktop:~# dvblast -f 12538000 -s 41250000 -v 13 -a 0
DVblast 3.1 (git-3.0-6-g179f049-dirty)
warning: restarting
debug: compiled with DVB API version 5.10

debug: capabilities:
```

(Tuner 1) dvblast -f 12538000 -s 41250000 -v 13 -a 1

(Tuner 2) dvblast -f 12538000 -s 41250000 -v 13 -a 2

(Tuner 3) dvblast -f 12538000 -s 41250000 -v 13 -a 3

(Tuner 4) dvblast -f 12538000 -s 41250000 -v 13 -a 4

(Tuner 5) dvblast -f 12538000 -s 41250000 -v 13 -a 5

(Tuner 6) dvblast -f 12538000 -s 41250000 -v 13 -a 6

(Tuner 7) dvblast -f 12538000 -s 41250000 -v 13 -a 7

### 6.3 Lock TV Channels from **DVB-S2** Signal. (See screenshot below.)

(Tuner 0) # dvblast -f 12660000 -s 45000000 -v 13 -m psk\_8 -a 0

```
root@zwh-desktop: ~
zwh@zwh-desktop:~$ sudo -s
[sudo] password for zwh:
root@zwh-desktop:~# dvblast -f 12660000 -s 45000000 -v 13 -m psk_8 -a 0
dvblast 3.1 (git-3.0-6-g179f049-dirty)
warning: restarting
debug: compiled with DVB API version 5.10
debug: using DVB API version 3.0
debug: Frontend "TurboSight TBS 6905 DVB-S/S2 " supports:
debug: frequency min: 950000, max: 2150000, stepsize: 0, tolerance: 0
```

(Tuner 1) # dvblast -f 12660000 -s 45000000 -v 13 -m psk\_8 -a 1

(Tuner 2) # dvblast -f 12660000 -s 45000000 -v 13 -m psk\_8 -a 2

(Tuner 3) # dvblast -f 12660000 -s 45000000 -v 13 -m psk\_8 -a 3

(Tuner 4) # dvblast -f 12660000 -s 45000000 -v 13 -m psk\_8 -a 4

(Tuner 5) # dvblast -f 12660000 -s 45000000 -v 13 -m psk\_8 -a 5

(Tuner 6) # dvblast -f 12660000 -s 45000000 -v 13 -m psk\_8 -a 6

(Tuner 7) # dvblast -f 12660000 -s 45000000 -v 13 -m psk\_8 -a 7

### 6.4 Such as VH **DVB-S2** you can do this

(Tuner 0)# dvblast -f 11080000 -s 43200000 -v 18 -m psk\_8 -a 0

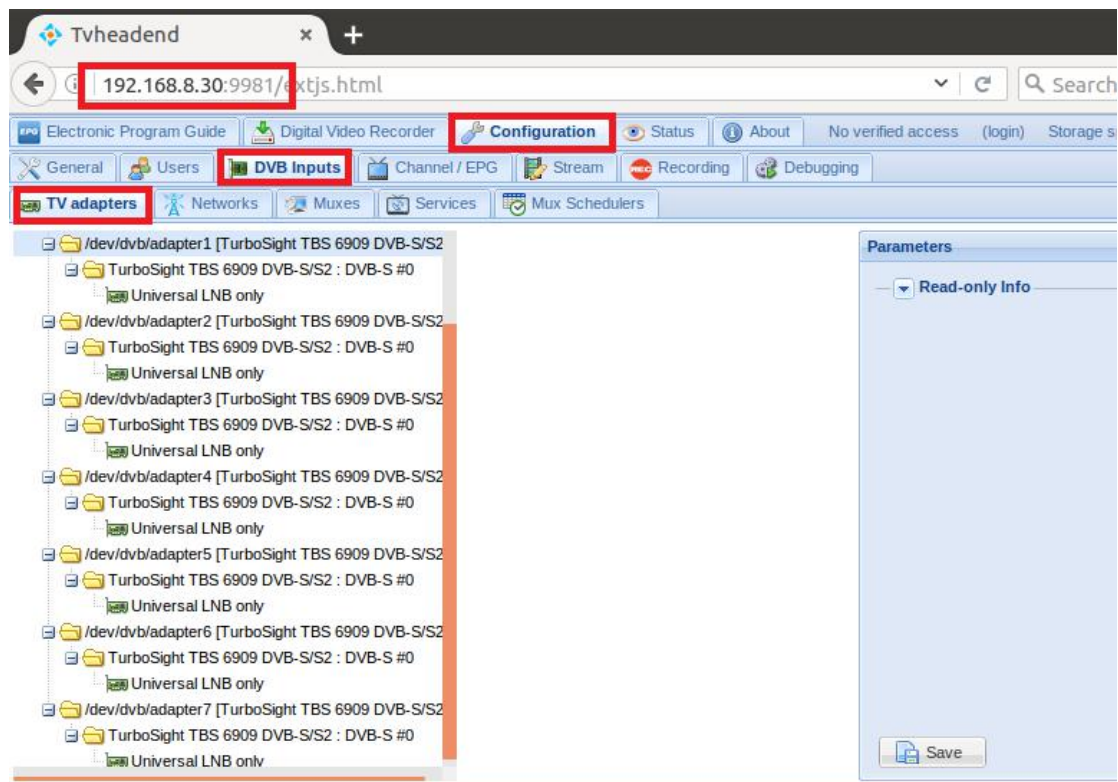

## 7. Tvheadend User Guide

### 7.1 Connect Satellite Cable to LNB

### 7.2 Install Software and Run tvheadend -C (See screenshot below.)

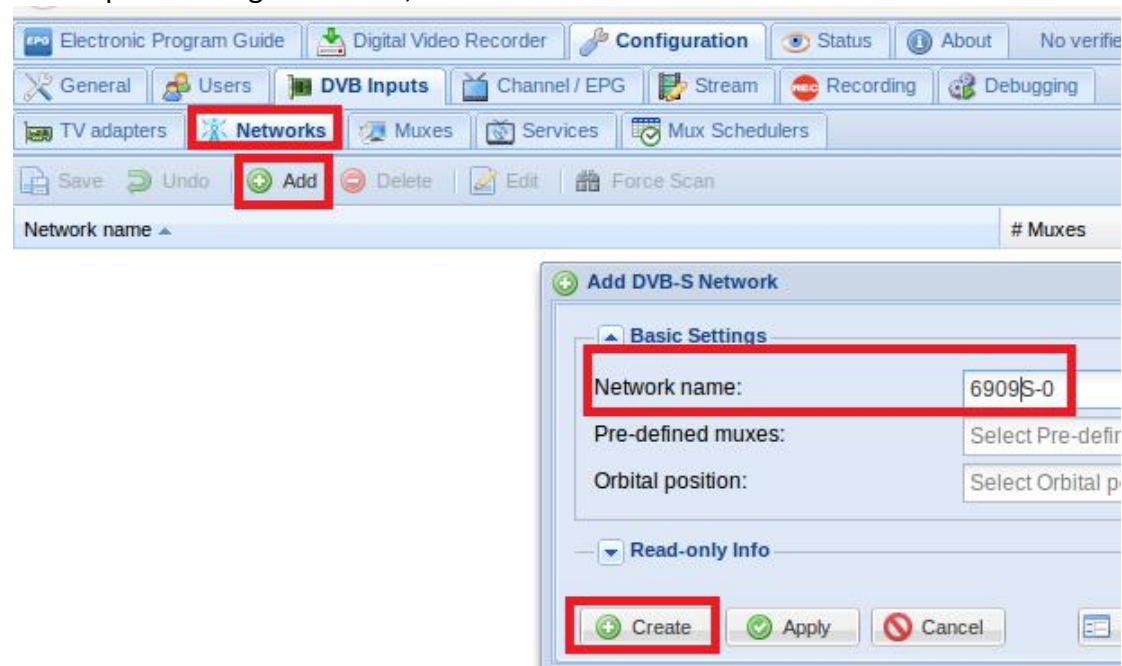

```

```

### 7.3 Launch Firefox browser, input the IP address of your PC and port number 9981 as below, then you can log in tvheadend configuration webui. (See the following screenshot.)

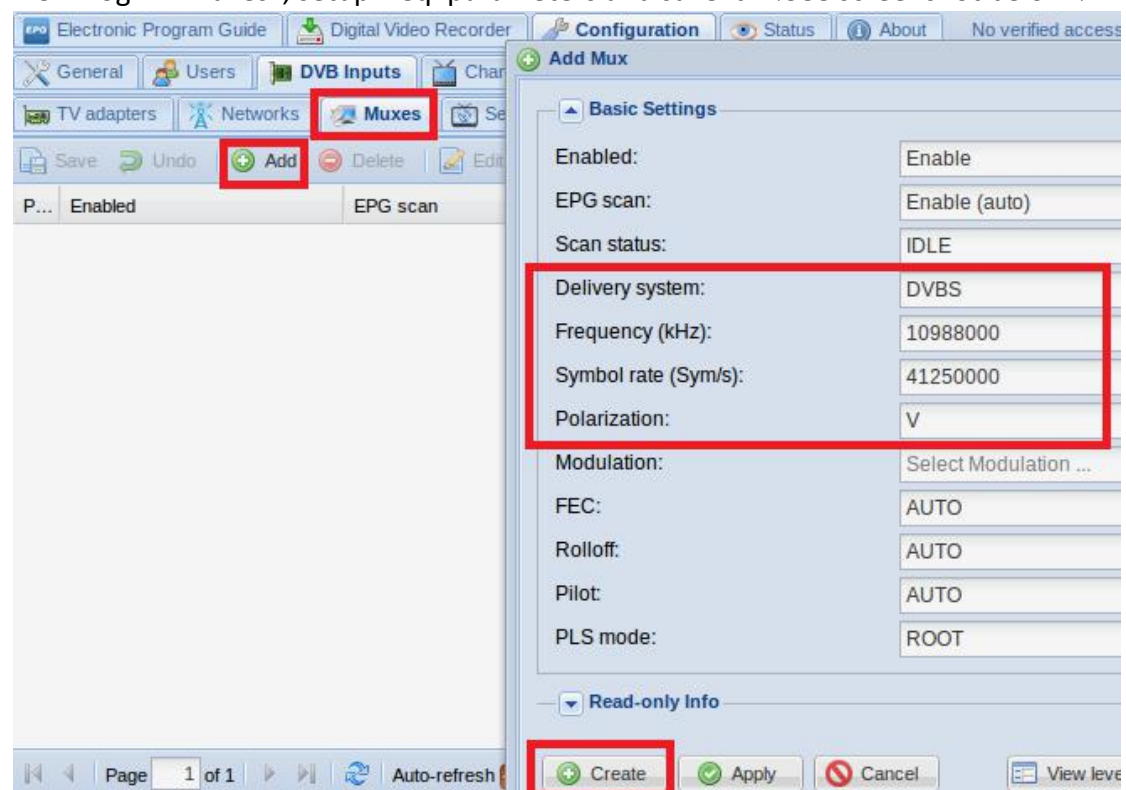

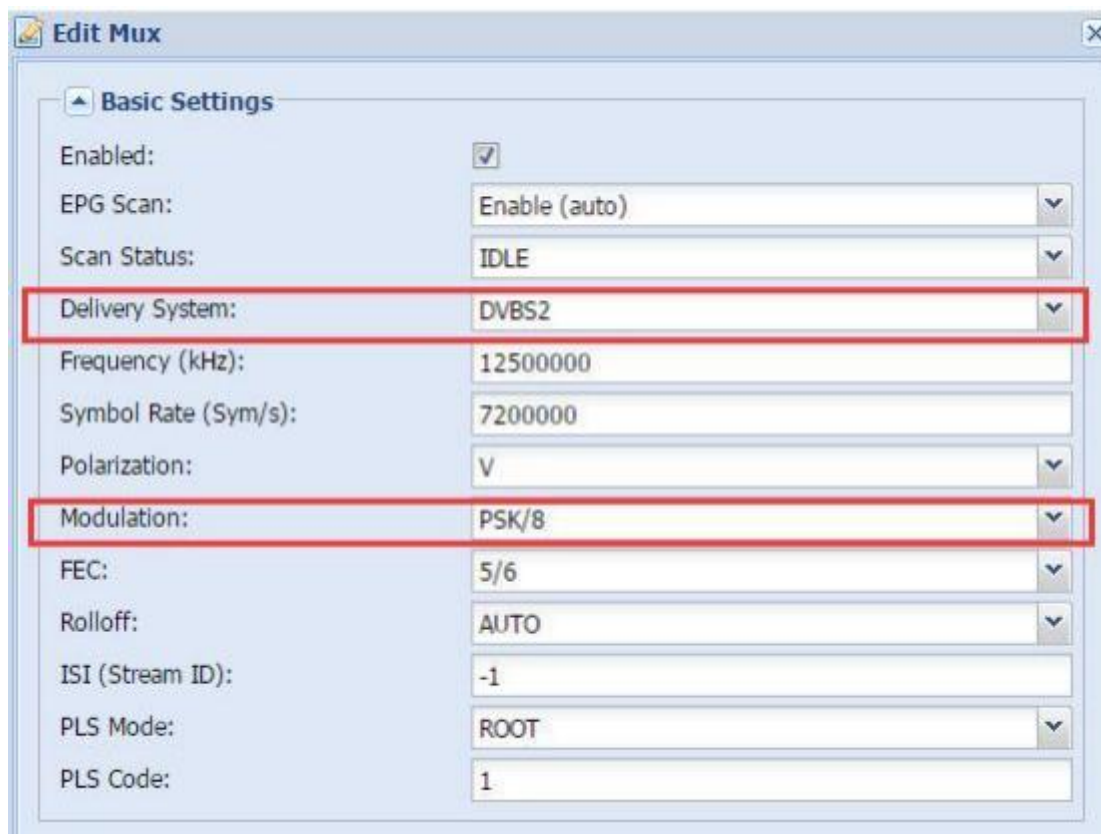

7.4 Log in “Networks”, set the right “Network Name” with product model number and required TV signal via LNB, and then save it. (See screenshot below.)

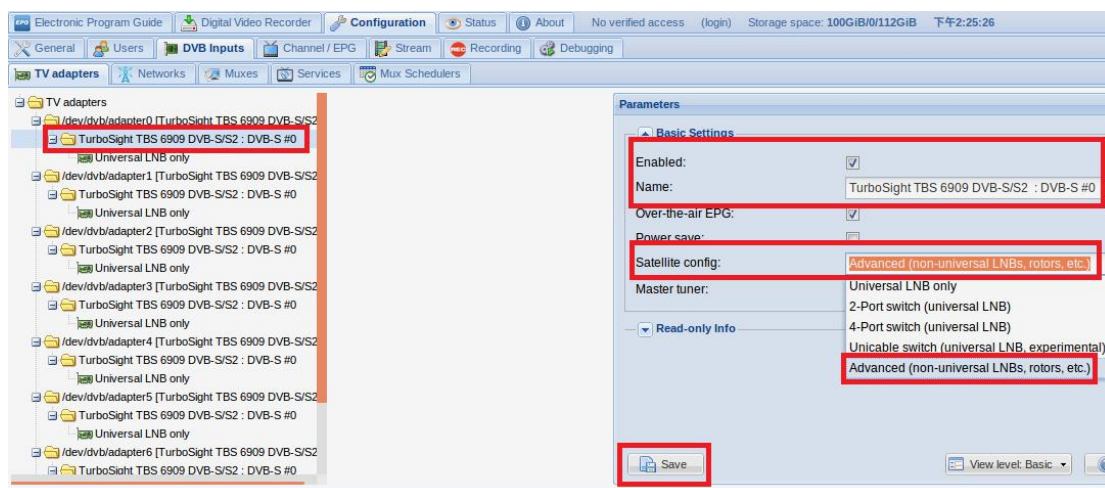

7.5 Log in “Muxes”, setup freq. parameters and save it. (See screenshot below.)

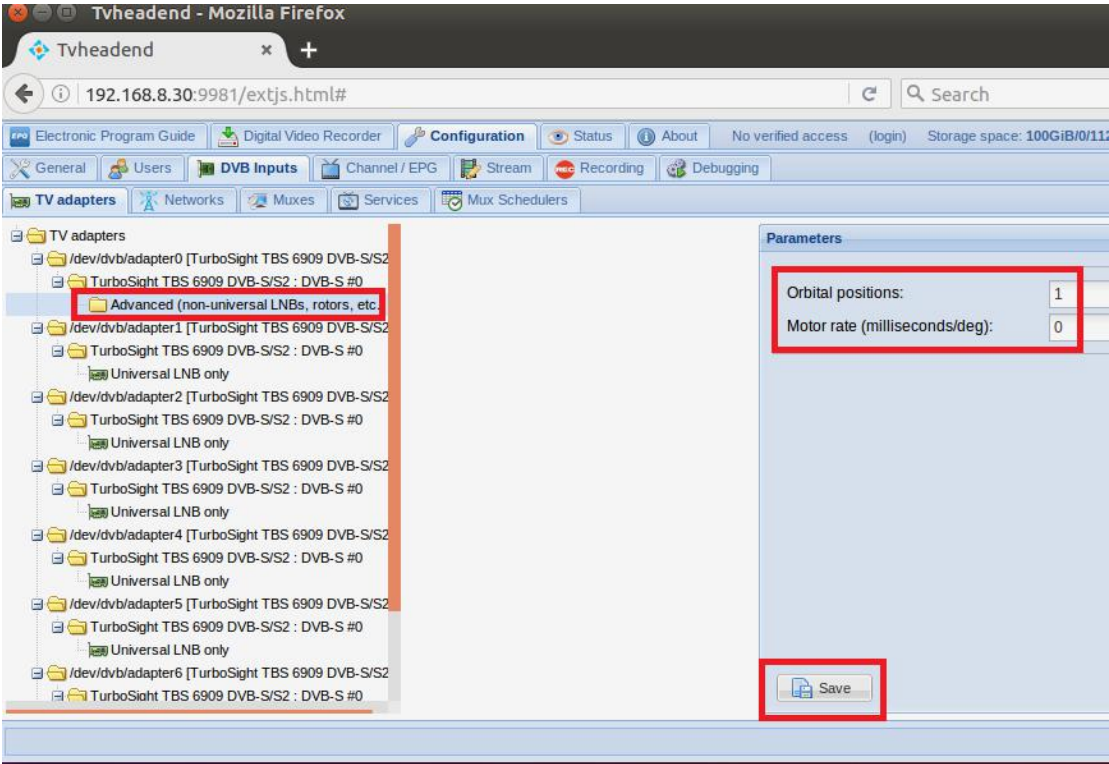

7.6 Set the “Delivery System” to DVBS2 and Modulation (See screenshot below.)

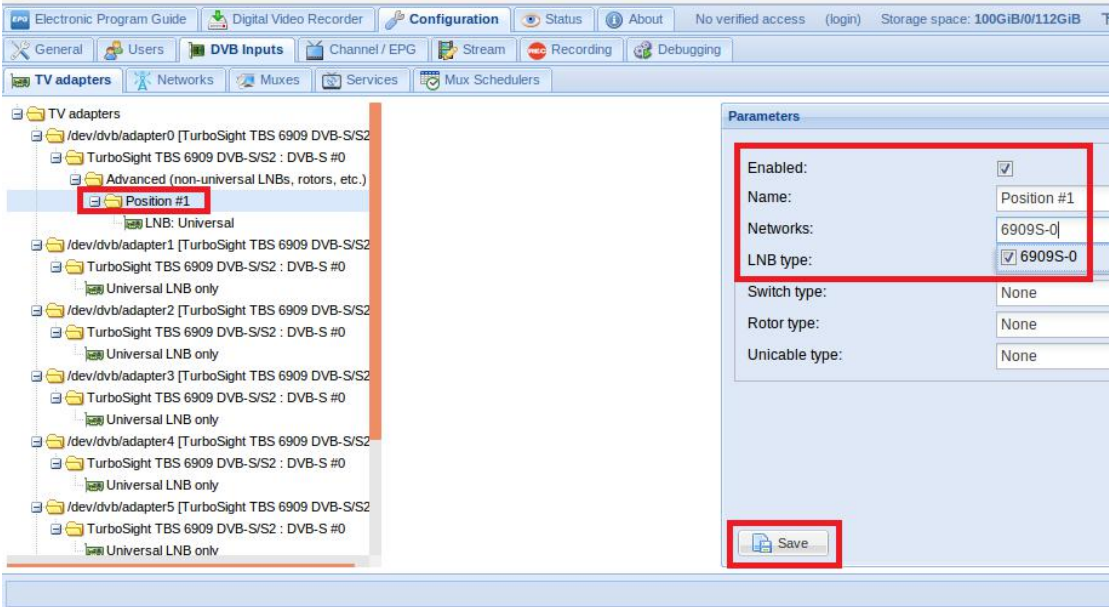

7.7 Enter adapters Tv, select the LNB port you want to play, open the TurboSight, and set the reference map to save (See screenshot below.)

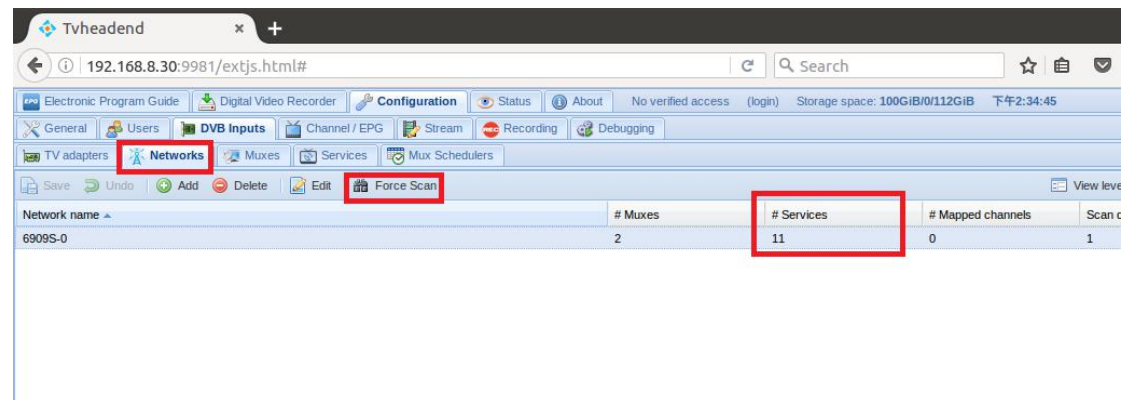

7.8 Click Advanced to save the settings in the reference diagram. (See screenshot below.)

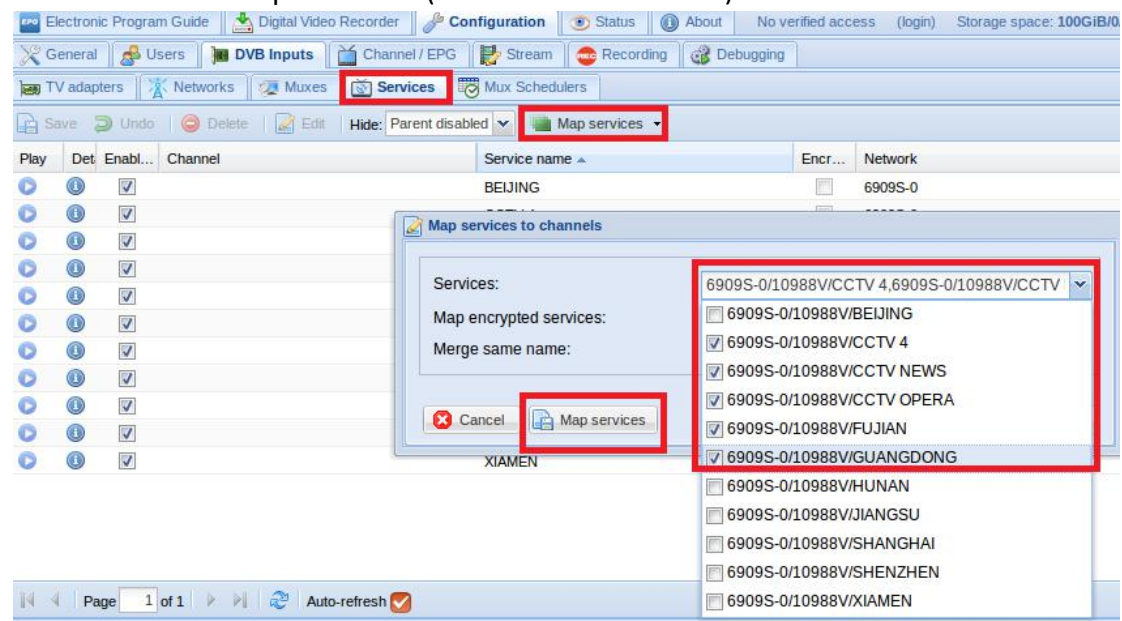

7.9 Click #1 Position, add the settings provided by the network channel, save (See screenshot below.)

7.10 Log in “Networks” and then click “Force Scan” to lock TV channels. ( See screenshot below.)

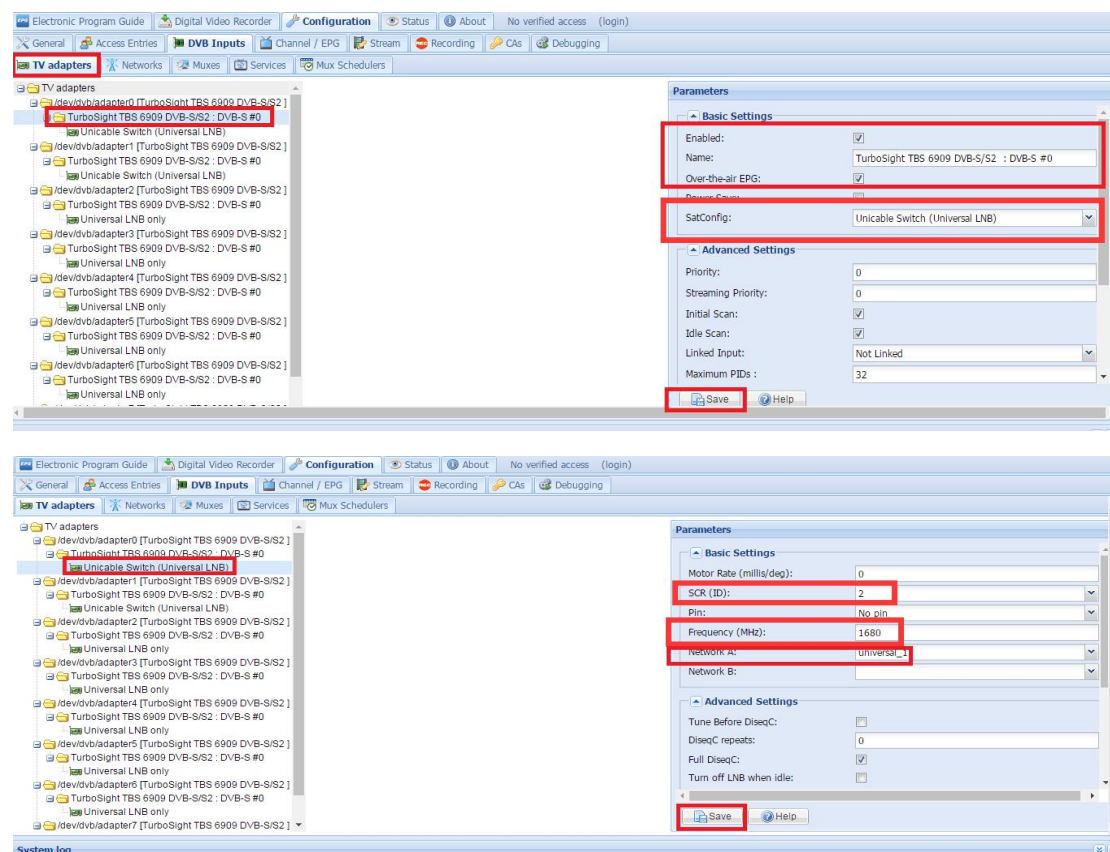

7.11 Log in “Services”, you can live streaming all the TV programs that you would like to watch in “Map services”. (See screenshot below.)

7.11 If you want to work Tuner 1 to Tuner7, please set the correct configuration parameters, according to the "tvheadend 7.4-7.11" step.

## 7.12 Unicable Mode setting (See screenshot below.)

## 7.13 Remaining steps to perform.7.4 and 7.5, 7.9 and 7.11

## 8. Astra User Guide (Trial version)

### 8.1 Connect Satellite Cable to LNB

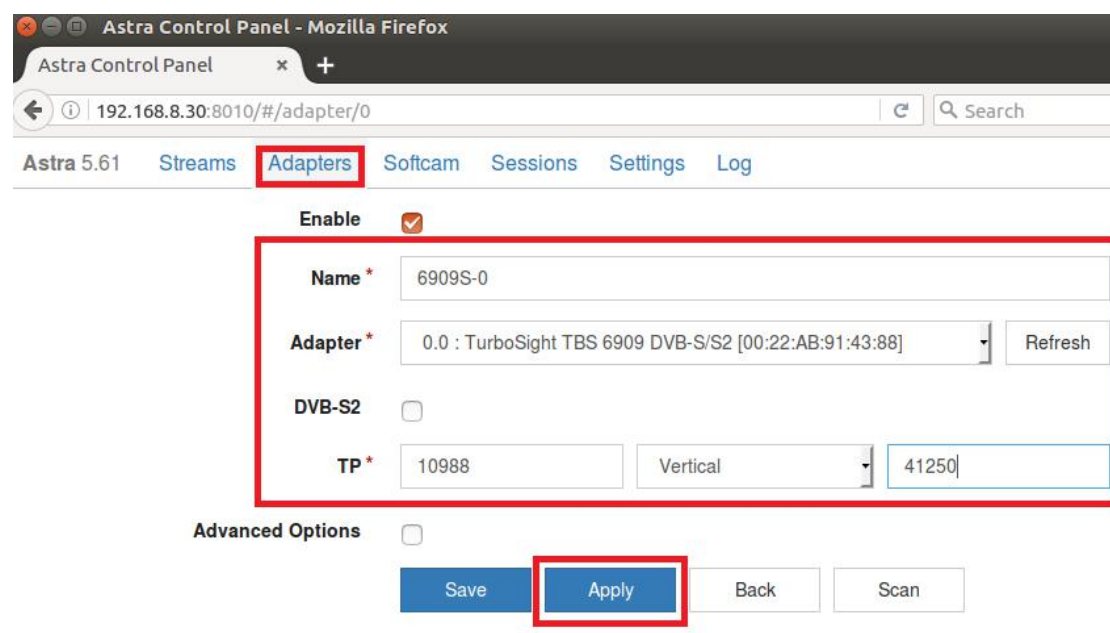

### 8.2 Install astra software and run the program. (See screenshot below.)ms

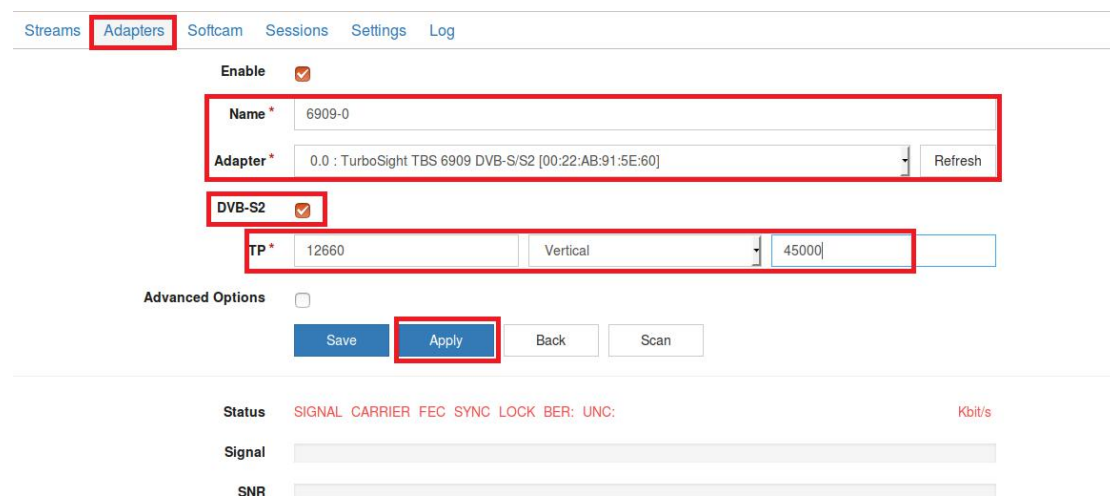

8.3 Open Firefox browser, input the IP address of your PC and port number 8010 as below, then you can log in astra configuration webui. (See the following screenshot.)

8.4 Create a new “Adapters” and then set the right satellite TV signal and frequency parameters via LNB, finally click “Apply”. (See screenshot below.).

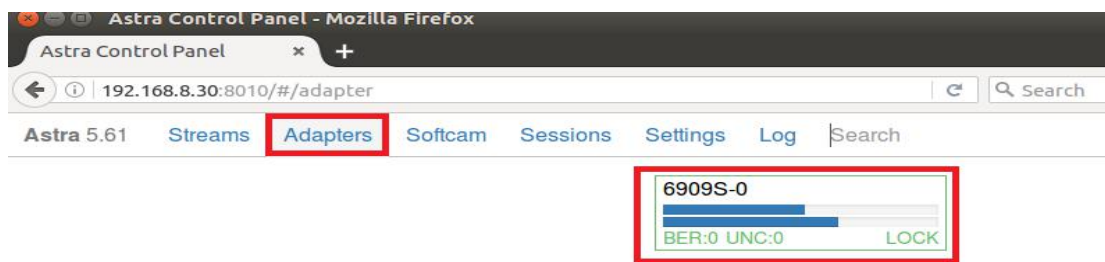

8.5 Set the “Delivery System” to DVBS2 and Modulation (See screenshot below.)

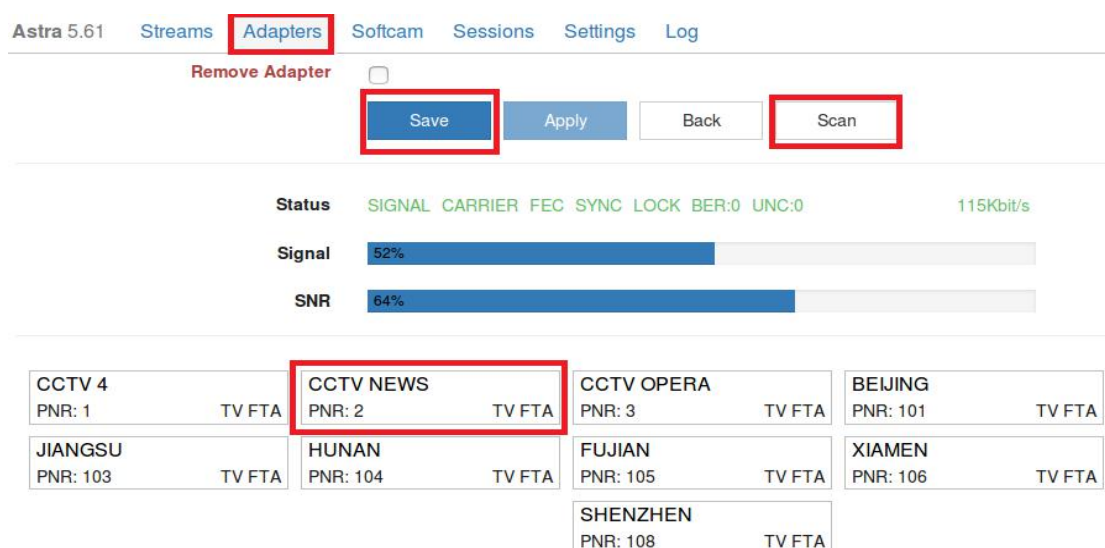

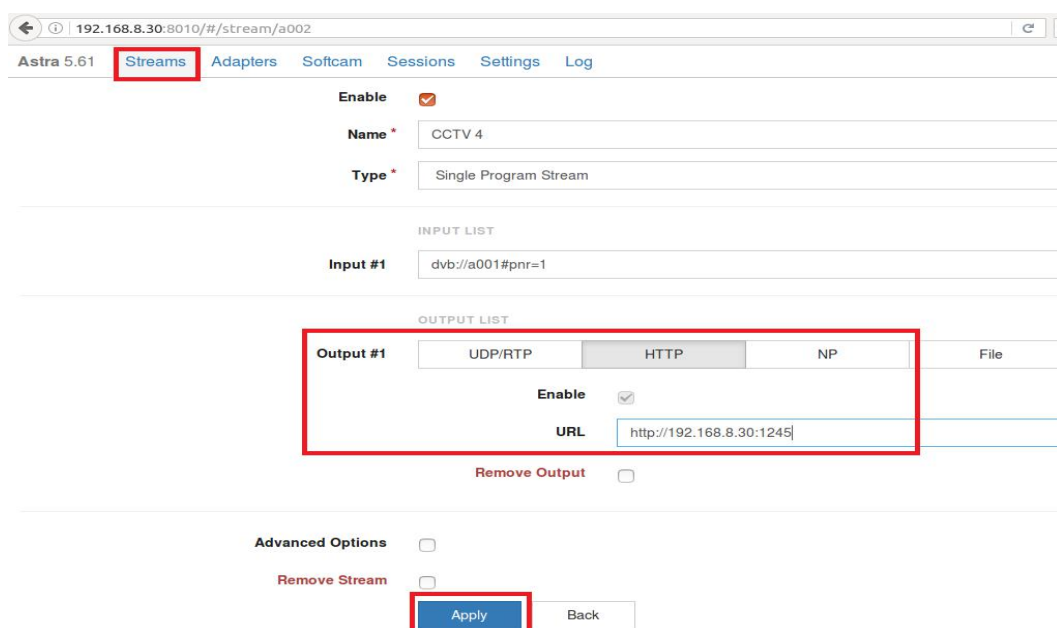

8.6 Log in “Adapters” again. If the LNB signal indication pops up in the window, you have successfully completed the configuration. Click it and enter into the operation interface. (See screenshot below.)

8.7 Log in “Adapters” to scan TV channels, and then select the programs that you would like to watch. Finally click “Save” as below.

8.8 Save all the selected TV programs, you will find them in “Streams”. Then please set the output protocol according to your needs. Finally click “Apply” as below.

## FAQ

### Linux:

1. How to install the driver

Closed Driver install steps:

<http://www.tbsdtv.com/forum/viewtopic.php?f=86&t=9875>

Open Source Detail steps:

<http://www.tbsdtv.com/forum/viewtopic.php?f=86&t=9960>

2. Can not compile the driver in CentOS 7

check your kernel version:

`uname -a`

Link the build folder .Go to this folder such as :

`cd /lib/modules/3.10.0-327.13.1.el7.x86_64/`

`ln -sf /usr/src/kernels/3.10.0-327.10.1.el7.x86_64/ build`

Then install the driver as normal steps

3. How to use tvheadend.

Check this:

<http://www.tbsdtv.com/forum/viewtopic.php?f=86&t=9949>

4. How to use astra.

Script Guide:

<http://www.tbsdtv.com/forum/viewtopic.php?f=86&t=9862>

Video Guide:

<http://www.tbsdtv.com/forum/viewtopic.php?f=86&t=9976>

5. How to use OSCAM with tvheadend

<http://www.tbsdtv.com/forum/viewtopic.php?f=86&t=10049>

6. How to use mumudvb

<http://www.mumudvb.net/doc/mumudvb-1.7.3/QUICKSTART.html>

[http://www.mumudvb.net/doc/mumudvb-1.7.3/README\\_CONF.html](http://www.mumudvb.net/doc/mumudvb-1.7.3/README_CONF.html)

Windows:

1. Windows 7 x64 Code 52 issue

Please check this guide:

<http://www.tbsdtv.com/forum/viewtopic.php?f=86&t=9989>

2. Does your driver support windows 10?

No problem you can feel free using windows xp,vista/7/8/10

1. Can't watch the HD channels,only picture or only audio.

Make sure that you have installed the right video and audio decoder.

2. Where I can get the TSReader dll support?

You can get it on our download page :

[http://www.tbsdtv.com/download/document/common/tsreader-bdasource\\_v1.0.8.7-20150604.zip](http://www.tbsdtv.com/download/document/common/tsreader-bdasource_v1.0.8.7-20150604.zip)

3. Where I can get the StreamReader dll support?

You can get it on our download page :

[http://www.tbsdtv.com/download/document/common/streamreader-dll\\_v1.0.0.3.zip](http://www.tbsdtv.com/download/document/common/streamreader-dll_v1.0.0.3.zip)

4. Why can't use it with Windows Server 2008

Please install this patch for your windows server 2008:

[http://www.tbsdtv.com/download/document/common/win2008\\_bda.zip](http://www.tbsdtv.com/download/document/common/win2008_bda.zip)

5. The card don't been detected by motherboard.

Please refer to attached pics to change some pcie setting on BIOS and update the BIOS to the latest version. make sure set the PCI-E link speed to Gen1 like this ,as most users after set the BIOS it can detect our card so you can have a try.

6. How to set dvbdream support 8 diseqc?

Open "Options" item then select "Diseqc", Diseqc Switch Type "None".

After add one satellite,open "Properties", can set diseqc port by "Uncommitted" from 0 to 15

7. What kind of antenna to use(DVBT/DVBT2 Card)?

Our all dvbt/t2 card just support the parasitic antenna. If you use the active antenna, you need supply power to antenna.

8. Whether support CI+?

Our all CI card just support the CI, do no support CI+.
