

TBS690A

4 Input DVB-ASI Video Capture Card

TBS690A is a DVB-ASI video capture card with 4 channels input, which used to receive DVB transport streams up to 270 Mbps/channel on one card, and the transport streams can be single programs or multi programs. TBS690A is ideal for high-density applications requiring up to four ASI inputs, the input channels can run independently. With minimal power consumption, TBS690A is tailored for industrial applications where reliability is an option.

Main Features:

- DVB-ASI input
- Compatible with DVB Standard
- Four receiver channels on the same PCI-e card
- Full DVB-ASI throughput of 270 Mbps per channel
- Bandwidth can be divided as required between the ports
- Signal quality sensing support in hardware

Applications:

- IPTV Servers
- ASI to IP conversion
- Datacasting and monitoring
- Electronic Program Guides (EPG's)
- Broadcast TV
